

# Liberty™ CFX Floor System

- Easily installed in a variety of exit/entrance widths
- Discreet design frees up valuable floor space
- Compatible with a variety of 8.2MHz tags and labels

The ideal design for apparel and specialty retailers, the Liberty CFX system is built to provide superior security while supporting a welcoming customer environment.

When appearance matters, this invisible system offers unlimited coverage in a highly flexible package that blends seamlessly with any store's décor. With no vertical pedestals to interfere with floor traffic, apparel and department store retailers receive the security of an EAS system without sacrificing the aesthetics and selling space of the store.

The Liberty CFX, a transceiver-based single antenna system, is installed into the floor and is available to span 4, 8, or 12 foot wide openings. Checkpoint can also work with a retailer to accommodate wider openings to provide the best EAS system for their specific needs.

This system is the only hidden EAS system capable of detecting at heights up to 5 feet with a variety of 8.2MHz tags and labels including integrated RF-EAS labels.

Used together with RF source tagging and Checkpoint's non-contact deactivation technology, the Liberty CFX is the ultimate EAS solution for today's image-conscious retailer.

## Specifications

- Product Number:** 7301210 (4' opening)  
7386220 (8' opening)
- Frequency:** 8.2MHz nominal target frequency

When floor space is limited, the Liberty CFX provides the perfect threshold of security.

**Confidence. To do more.**
