Web-based reporting and user friendly reports make accessing and sorting data quick and easy.

Features:

- Performs electronic EAS alarm data capture
- Provides convenient web-based reporting
- Offers an intuitive user interface
- Provides customizable alarm response codes
- Automates data transmittal

CheckPro Manager™ Data Collection Software

In a retail environment, knowing why an alarm goes off is as important as the alarm itself. Each time an alarm sounds an associate should respond and evaluate the situation; without employee reaction, your LP system is not working to its full capacity.

Our advanced CheckPro Manager loss prevention solution lets you collect, manage and analyze alarm activity data – easily and accurately. In fact, this comprehensive tool set improves store associates' reaction rates, deters customer and employee theft and helps to reduce shrink – all while monitoring alarm compliance.

Capture Data You Can Use

Designed around an intuitive, easy-to-use interface, the CheckPro Manager system is simple to learn and administer. After an alarm condition is triggered and investigated by a sales associate, event details can be quickly entered via predefined response codes into the ATM-style CheckPro Manager data collection unit. Key information such as alarm description, associate response time, disturbance location and SKU level data can be instantly captured. Minimal training for store employees immediately increases operational efficiency and profitability.

Real-time Data Aggregation

Data is conveniently stored in the base unit and then securely transmitted at scheduled intervals to Checkpoint's data center. Data can be easily accessed and manipulated through the Checkpoint reporting website. This flexible, easy-to-use site allows alarm data to be viewed and analyzed through user-friendly reports and graphs. Accurate analysis of your data is quick and easy.

CheckPro Manager[™] EAS Data Collection and Reporting

Specifications:

Dimensions Data Collection Unit: 8"W x 9"L x 4"D (20.32cm x 22.86cm x 10.16cm) Power Requirements

110-120 VAC at 50-60 HZ; 3 wire, switched

Mounting Requirements/Guidelines

Flat mounting service approximately 12" square (77.42 cm square)

Environmental

Operating Temperature: 10°C to 45°C (50°F to 113°F) Storage/Operating Humidity: 5% to 90% non-condensing

Secure Data Transmission

Analog phone line Hardwire or wireless Internet Configurable data transmission schedules

Optional Components

People counter hardware Scan gun Printer assembly Strobe

System Capabilities:

Data Collection Unit

EAS management Customizable response codes Customizable auxiliary data capture Visual Timer Activity Review Service management People counter integration Customizable data exchange CCTV and DVR integration Service diagnostics Automatic software updates

Reporting

ASP-based reporting Web-based access to reports Microsoft Internet Explorer v5.0 or higher Netscape Navigator v4.7 or higher User authentication at log-in Customizable data reports Print, email and export to other file formats directly from reporting site Sort by data range and hierarchical level Graphic report representation

Administrator

Web-based account administration for EAS Management, Service Management and Customizable Data Capture

Compact, wall-mounted display allows for easy access by in-store personnel or service technicians.
